

SIT723 Research Project A

Pass Task 11.2: Research Handover

Overview of the task

This task involves collating all the artefacts resulting from your work conducted in SIT723. The set of artefacts includes all outcomes of each sprint, literature review and research design. The handover artefacts should describe the state of your project in such a way that your supervisors can continue working on the research idea in future without having to ask you for clarifications and/or further artefacts. The handover artefacts also need to include the long-term vision of the research project as well as your views/ideas in which direction the project should progress.

Think in terms of copying all relevant artefacts as well as description of the state of the research project onto a USB memory stick and handing this over to your supervisors. Your supervisors should be able to have access to all the information required by copying this USB memory stick.

This task is particularly relevant for the students who will not continue in SIT724.

Instructions

Your handover repository should include (among others): - An export of your overleaf projects into a zip file with all source files; - Literature sources or the repositories prepared; - Source for the artefact developed (with versions); - All the data collected for the project and analysis scripts; - Any other artefact relevant or produced during your research project; - A documents describing all the components packaged and how to use them for re-building your project;

Submission Details

Submit the following to OnTrack: A single PDF document with the link to your handover repository.
