

# SIT723 Research Project A

## Pass Task 11.1: Research Presentation

---

### Overview of the task

At this stage, your SIT723 research report is almost complete, and you have already completed your literature review, research design, (minimum-viable) artefact development, and evaluation. In this task, you will present your research project in a 2-3 minutes video. Consider this as your opportunity to present your research ideas to an audience that has a basic understanding of computer science. Structure your presentation in a way that would best convey the importance of your research project. An example structure is (1) discuss the motivation behind your research project and the problem you are attempting to solve; (2) Why is worth studying, e.g., research gaps; (3) What did you achieve in your research project; (4) Demo of your artefact and evaluation results; and (5) how can-you or plan-to take it further.

**It is important that you strictly remain within the time-limit. Longer videos can lead to failing the task and might reflect on your grading for research dissemination.**

### Instructions

Record a video (with screencast) of your research presentation. Upload your video to Deakin Air or an online video sharing service and then provide a link to your video. Once you have done so, please let your supervisor(s) know.

### Submission Details

Submit the following to OnTrack: A single PDF document with the powerpoint slides used for your presentation, and link to your presentation video. Make sure the links in the pdf file are clickable.
